MEMORANDUM FOR: Programs Staff, OSA

SUBJECT : Determination of Personnel Requirements to  
Support OXCART Operational Commitments

1. This office has reviewed Materiel Staff (MD/OSA) requirements as requested by your memorandum, same subject, 30 December 1965.

2. Attachment 1 depicts the normal progression of staff participation by functions in a weapon system or new product development. Movement of these actions is obviously directed towards an operational objective, at which time the logistics elements, i.e., supply, maintenance, transportation, are necessarily called into full play. This progressive in-bulk shift of functional responsibilities and the resultant impacts on the Materiel Staff were recognized some time back by this office, particularly when matched to existing personnel assignments.

3. Attachment 2 presents the Table of Organization proposed for this office. In arriving at this structure, a realistic approach was taken in weighing out the factors noted above against the five phase concept of operational readiness, except as indicated by asterisk in Attachment 2 for Phase V.

4. The attached Table of Organization will stand as a "present day" requirement for this Materiel Office independently of the Five Phase Concept. It is, however, of sufficient depth and flexibility to adequately accomodate Case I through Case IV phases of operational readiness, using the planning factors in your memorandum. For Case V, one additional position in the Special Support Section is proposed to handle the additional workloads envisioned for a second TDY base established overseas.

  
Chief, Materiel Division  
OSA-DD/S&T
